Taking Steps

Some problems have more than one step.
Carefully read each problem. Then decide which steps you should take to solve it. Write the steps in order.

Example: The Ferris wheel costs 5¢. Lin has 2 quarters and 2 dimes. How many times can she ride the Ferris wheel?

Step 1: Find out how much money Lin has:

\[25¢ + 25¢ + 10¢ + 10¢ = 70¢\]

Step 2: Divide 70¢ by the cost of one Ferris wheel ride: \[70 ÷ 5 = 14\]
Answer: Lin can ride the Ferris wheel 14 times.

1. Hector won 6 bags of marbles. Each bag has 10 marbles. If Hector gives 3 friends an equal number of marbles, how many marbles would he give each friend?
   Step 1: _______________________________
   Step 2: _______________________________
   Answer: ______________________________

2. Jenni had \(\frac{9}{10}\) of a bag of popcorn. She ate \(\frac{3}{10}\) of the bag. Then her sister ate \(\frac{2}{10}\) of the bag. How much popcorn is left?
   Step 1: ________________________________
   Step 2: ________________________________
   Answer: _______________________________

3. Brett started with 32 baseball cards. He sold 8 cards. Then he bought 12 more. How many cards does he have now?
   Step 1: ________________________________
   Step 2: ________________________________
   Answer: _______________________________
